## GERELTUV DASHDOOROV >>

AN UNCOMMON ADVENTURE AWAITS YOU

## SHORT BIOGRAPHY >>

Gereltuv Dashdoorov is a graduate in international relations and is programs director at Nomadic Expeditions. He ran Nomadic Expeditions' office in New Jersey, USA between 2002-2005 and represented the company and Three Camel Lodge in North America. He works in planning and coordination of its natural, cultural and educational expeditions and marketing of the Three Camel Lodge. His responsibilities include coordinating resources and information for new programs and projects at and the involvement of non-government agencies and herding families in Three Camel Lodge eco-programs.

Our vision: “Throughout all of our travels, we are committed, both as a company and as individuals, to supporting the cultures and heritage of the lands we visit and to protecting the biodiversity of the ecosystems we explore “

## ABOUT NOMADIC EXPEDITIONS >>

Nomadic Expeditions is a member of the International Ecotourism Society and is the premier Ecotourism travel company in Mongolia. They provide a range of travel experiences including camel and horse trekking, palaeotological field-trips, kayaking, hiking and cultural and religious festivals and run Mongolia’s premier Ger-camp, the Three Camels Lodge. They create and sponsor environmental programs such as zero interest loans to Ger-camps with sound ecological practices to local community anti-litter campaigns. By promoting locally-based tourism, economic stability is provided for rural communities thereby reducing the necessity to relocate to cities —a desirable alternative to rapid urbanisation and industrialisation. Nomadic Expeditions has coordinated field-trips for organisations such as the Asia Foundation, American Museum of Natural History, Soros Foundation, and WWF and they consult to the government on ecotourism and business development. For more information, please visit [www.nomadicexpeditions.com](http://www.nomadicexpeditions.com).

## ABOUT MONGOLIA >>

Because of Mongolia’s low population density and nomadic lifestyle, the country contains some of the last relatively pristine examples of Asia’s deserts, steppe, forests and mountains including the flora and fauna indigenous to each ecosystem. Within these ecosystems are found some of the world’s most elusive and endangered species, such as the Gobi Bear (the world’s only desert dwelling bear), Wild Camel and Snow Leopard. The Mongolian government has committed to protecting it’s unique habitat by setting aside one tenth of its territory into a system of protected areas and has pledged to increase this to 30% of the country, resulting in the largest national park system in the world.
