

Connecting people with energy

Citysolar is Townsville City Council's program in support of the Ergon Energy-led Townsville: Queensland Solar City project. The program aims to involve the community in an energy-wise response to climate change.

Council's Citysolar program will:

- » Inform and educate the community about energy supply, use and conservation
- » Demonstrate cutting-edge solar power technology and design in our public urban buildings and spaces
- » Connect with schools and community groups to drive wide-scale community change.

Tips to be energy wise:

- » Replace incandescent globes with Compact Fluorescent Lights (CFLs).
- » Turn off chargers and appliances when not in use.
- » Replace old appliances with energy-efficient ones.
- » Shade walls and windows exposed to the sun.
- » Purchase Green Power from an accredited renewable energy provider.
